

**ASSISTME**  
The Care App

Less Pattern - More Care

## YOUR DIGITAL CARE ASSISTANCE

Improve quality of life, support caregivers and save costs - AssistMe brings digitalisation to care.

## FOUR STEPS TO HIGHER SAFETY

### How your digital care assistance works

The reusable clip attaches to the sensor-based incontinence product and estimates its fill level as well as the movements of its wearer.

The clip sends the data to the cloud in real time: does the incontinence product need to be changed? Is it time for repositioning? Has anyone fallen?

All relevant information is processed for caregivers and made available via the care app.

The care recipients are thus cared for in a timely manner. This has a positive effect on their well-being, and at the same time, relieves the caregivers.

## NEED-BASED CARE INSTEAD OF STANDARD CARE

### Why AssistMe?

The assistance system developed by AssistMe uses state-of-the-art sensor technology to detect care needs in real time. The sensors are simply attached to the incontinence product and detect both its fill level and possible movements of its wearer.

Caregivers track the status via an app on their mobile device and can take immediate action when it's time to change the incontinence product, individuals need to be repositioned, or someone has fallen.

**AssistMe is suitable in home care as well as in long-term and stationary care.**

# ASSISTME IN ACTION

## What caregivers say about our solution

- “ I like the system. I can manage my time better and become more productive.
- “ It's a relief. I can arrange my rounds according to it and have more time for the bedridden.
- “ Our laundry needs have been noticeably reduced because we have significantly fewer wet beds.
- “ The idea behind AssistMe is really awesome! Every time we do a visual check, we have to turn our pain patients to be able to pull down the mesh pants. Every turn that can be avoided is a real relief to them.
- “ By changing as needed, we need noticeably fewer incontinence products. Especially at night, we disturb the residents considerably less. We notice this in the morning - they are better rested, more attentive, and less at risk of falling.

# MORE THAN JUST AN APP

## The advantages at a glance

AssistMe enables individualized incontinence management and creates valuable support in pressure ulcer prevention, fall prevention and fall recognition through smart motion detection.

Everyone involved benefits from this:

### Care recipients

- experience higher safety
- increase their well-being
- receive increased attention
- are cared for with a sense of dignity

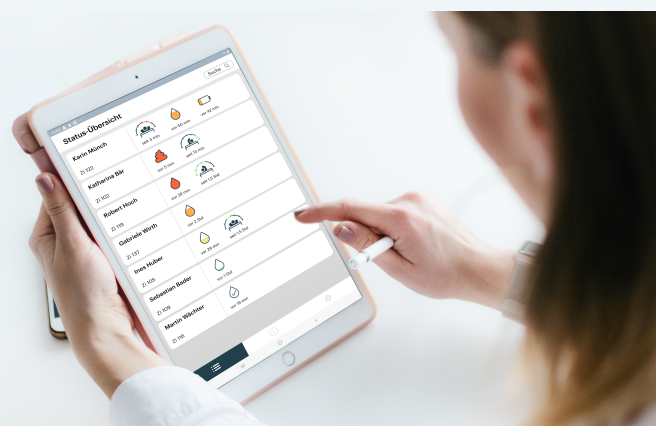

### Caregivers

- simplify their work processes
- allocate their energy better
- create more time for interpersonal activities
- simplify their documentation work

### Caring facilities

- improve the quality of their care
- save material and laundry costs
- reduce unnecessary waste
- position themselves as an attractive employer

# About AssistMe

Caregiving work is one thing above all: a valuable service to people. We develop digital solutions that relieve caregivers of administrative and redundant tasks. This allows them to focus on what's really important: humanity.

## More quality of life in care
